Subject: Microsoft are evil.

Microsoft are probably THE biggest example of a monopoly I've ever seen. They make you buy their operating system if you want a GUI style operating system that will work with the x86 lines of processors (the most common types in use for home pcs). Then, they make you use their tools and programs. Have you ever tried uninstalling Internet Explorer? HA! Good luck! Same goes for any other major program or utility that Microsoft load in with their operating systems. If you guys don't do something, they WILL try and take over the software market, guaranteed.
